

Zen Dynamic Indicators v2.0

***Dynamic, nonlinear indicators
for chaotic, nonlinear markets!***

Scope of services:

1. DNMM or Dynamic Natural Market Mirror

This indicator calculates a dynamic average of nonlinear price changes of the price data sources and tries so to analyse the current state of the market.

2. DNMR or Dynamic Natural Market River

This indicator calculates a cumulated value using nonlinear price changes and dynamic numbers of single price data items and tries so to analyse the current state of the market.

3. DNMA or Dynamic Natural Moving Average

This indicator calculates a dynamic exponential moving average of nonlinear changes of the data sources and tries so to compare indicator with the underlying data.

4. Implemented as fast and compact Windows Standard DLLs.

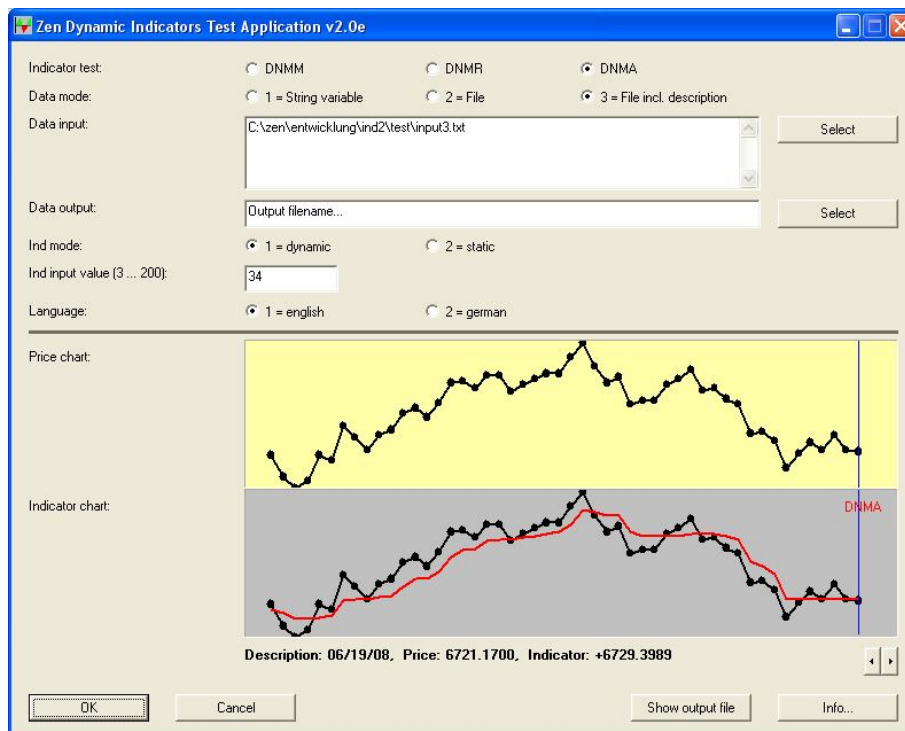

5. Test applications and Excel examples to show the use of the DLL component library are provided!

Why new indicators?

Markets are nonlinear or chaotic.

Why should the most widely used static and linear technical analysis methods successful deliver a sufficient explanation of these markets?

The **Zen Dynamic Indicators** are consistently dynamic and nonlinear indicators for all markets and time frames!

System prerequisites:

Win32 Software (Windows XP, Vista, 7 etc.),
very low hardware requirements

Prices:

**Free
demo version!**

Single User License:
Zen Dynamic Indicators v2.0 Package
(DNMM, DNMR & DNMA) € 250

Multi User Licenses etc. Prices on inquire
